Abstract

This research is the first year in four year project, the target in this research includes qualitative research method and quantitative research method. Qualitative research method mainly focus on the high risk characteristic of students in school violence and affect factor within middle to high school in Taiwan. While quantitative research method investigates the situations and problems about students who have a high risk characteristic in school violence. Also, prevalence rates, types, severity and distribution have been considered.

The method separates in two parts, the first part is students with high risk characteristics in school violence, and the second part is the investigation of the situations. The first part through the Open-ended questionnaire and focused-interview take the survey for the teachers and students in Tainan elementary school, junior high school, senior high school and vocational high school. On the other hand, the second part takes a survey in the populations of 4th to 6th grade students, junior high school, senior high school and vocational high school. Moreover, the investigation divides Taiwan in eight parts, for each area that using randomized sampling in different level of two schools and pick up two to three classes testing Instruction questionnaire. As a result of this research, it shows the students who have a high risk characteristics in personal, school, leisure activities and family factor. The questionnaires have been collected 13926 papers, the types of violence can be discussed in two part. The first part is the bullying between students and students, the second part is the violence between teachers and students. In these two kind of violence that can be divided in serious violence and minor violence.

The violence between students and students, the research showed that there were 31.9% in elementary schools, 42% in junior high schools, 24.6% in senior high schools and 31.7% in vocational high schools happened at least one serious violence event at last year. For the minor violence event in last year, there were 52.6 % in in elementary schools, 64% in junior high schools, 49.7% in senior high schools and 56.7% in vocational high schools. Furthermore, violence between students and teachers, it showed that there were 2.2% in elementary schools, 3.2% in junior high schools, 1.8% in senior high schools and 2.6% in vocational high schools occurred at least one serious violence event at last year. For the minor violence event, there were 15% in elementary schools, 32.2% in junior high schools, 33.1% in senior high schools and 35.5% in vocational high schools happened at last year.

In Regression analysis shows the high risk factor of adolescence students' violence in fourth parts. In personal part, it includes smoking, drinking alcohol, academic performance, violence types, and anger states. For the second part, Family factors include mother's inspection and the relationship in family. For the third part, school's factors includes teachers and students' relationship, school behavior. For the fourth part, social-environment includes bad habits, peer relationships, witnessed violence and bullied experiences. The most important part is that there are significant difference in related risk factors of different types of violence (violence between students and teachers or violence between students and students). In addition to academic performance in the elementary and junior high stage than the senior high stage is more influential, there is no big change in the other risk factors with the adolescence students' school stage. However, in the research of adolescence school's violence types between Taiwan and other countries, it shows significantly distinctions on diversity violent types, social-populations and psychological status.

Finally, this research recommends developing a strategy for Taiwan students' preventive procedures. It must be started in elementary school. In future researches can centralize those factors on adolescence's violent behaviors, and develop an assessment tools to refrain violent behaviors.
